Re: Status Update - Violation Notice dated May 11, 2026

Subject: Fugitive dust corrective action and engineering review

Dear Mr. Tluczek:

Fiber By-Product Corp. is providing this status update regarding the Violation Notice dated May 11, 2026, concerning fugitive dust associated with the storage and transfer of sawdust at the White Pigeon facility.

As previously reported, the facility immediately stopped loading and unloading trucks outside of the warehouse. That interim control remains in place. All routine sawdust loading and unloading activities continue to be conducted indoors to reduce the potential for fugitive dust leaving the property.

The Company has evaluated permanent dust containment options, including doors and vinyl strip curtains. Based on that review, it appears that the warehouse may require engineering evaluation and potential building modifications before a permanent physical containment system can be properly installed and maintained.

Fiber By-Product Corp. will have its in-house engineering team evaluate the warehouse and recommend any renovations or improvements needed before a permanent solution is implemented. The review will focus on identifying a practical and durable containment approach for the warehouse opening while maintaining safe truck access and normal facility operations.

Interim Measures Remaining in Place

- Loading and unloading sawdust indoors only (SOP included below).
- Logging incoming and outgoing loads. (Current log included below).
- Monitoring for visible dust during loading and unloading.
- Cleaning spilled or tracked material as needed.
- Continuing to review feasible physical containment options for the warehouse opening.

Fiber By-Product Corp. remains committed to resolving the issue and preventing recurrence. Once the engineering review is complete, the Company will provide EGLE with an updated corrective action plan and anticipated implementation schedule.

Please contact me if you have any questions or would like additional information.

Sincerely,

Jared Porter

WHITE PIGEON WAREHOUSE

Indoor Sawdust Loading & Unloading SOP

Facility	Fiber By-Product Corp. - White Pigeon, MI
Purpose	Keep sawdust loading/unloading indoors and prevent dust from leaving the property.

Primary Objective: All routine sawdust loading and unloading must be done inside the warehouse. Outdoor loading or unloading is not allowed unless approved by the Plant Manager or designee.

Before Loading/Unloading	During Loading/Unloading	After Loading/Unloading
• Driver checks in with facility personnel. • Direct truck to indoor area.	• Keep activity inside the warehouse. • Minimize drop height and avoid unnecessary disturbance of sawdust. • Watch for visible dust. • Pause or adjust activity if dust becomes excessive.	• Check for loose sawdust on truck, trailer, floor, and doorway area. • Clean spilled or tracked material as needed. • Complete the load log.

Dust Response	Doors, Curtains & Housekeeping
• Stop or pause the activity if safe. • Reduce drop height or adjust loading method. • Clean spilled or tracked material. • Notify the Plant Manager or designee. • Record the issue and corrective action.	• Keep doors closed when not in use. • Do not leave doors or curtains open unnecessarily. • Report damaged doors, gaps, torn curtain strips, or loose hardware. • Keep sawdust buildup to a minimum. • Clean spills promptly and clean tracked material near doors and travel areas.

Load Log Required Each incoming and outgoing sawdust load must be logged.

Driver	Material	Date	Time	In/Out	Piled	Added to Inventory	Bay	Loaded Inside

Outdoor Loading/Unloading Exception

- Only allowed with Plant Manager/designee approval.
- Document the reason.
- Check wind/weather conditions.
- Minimize dust. Stop if dust leaves the property.
- Record the activity in the log.

REMINDER

Keep sawdust handling indoors.
Stop dust before it leaves the property.
