Don Tate, President
Pregis
2700 Wills Street
Marysville, Michigan 48040

SRN: N6944, St. Clair County

Dear Don Tate:

VIOLATION NOTICE

On May 19, 2026, the Department of Environment, Great Lakes, and Energy (EGLE), Air Quality Division (AQD) conducted an inspection of Pregis (Company) located at 2700 Wills Street, Marysville, Michigan. The purpose of this inspection was to determine the Company's compliance with the requirements of the federal Clean Air Act; Part 55, Air Pollution Control, of the Natural Resources and Environmental Protection Act, 1994 PA 451, as amended, MCL 324.5501 *et seq*; the Air Pollution Control Rules, Mich Admin Code, R 336.1101 *et seq*; and the conditions of Renewable Operating Permit (ROP) No. ROP0000585 v3.0.

Violations:

During the inspection, the following violations were observed:

Process Description	Permit/Rule Violated	Comments
FGFACILITY - Polyethylene Foam Manufacturing Process	ROP, FGFACILITY, Special Condition (SC) IV.2; R 336.1225 (Rule 225), R 336.1702(a) (Rule 702); and R 336.1910 (Rule 910)	Design/Equipment Parameters - The non-fugitive enclosure was not operating at a pressure lower than adjacent areas so that air flows into the enclosure through all Natural Draft Openings (NDOs).
FGFACILITY – VOC Monitoring System (CAMS/CEMS)	ROP, FGFACILITY, SC V.4.a; R 336.1213(3) (Rule	Testing/Sampling - The facility conducted the subsequent Relative

Process Description	Permit/Rule Violated	Comments
	213); 40 CFR Part 60, Appendix F)	Accuracy Test Audit (RATA) more than eight calendar quarters after the preceding RATA.

During the May 19, 2026 on-site inspection, I conducted a qualitative airflow assessment near several entry doors to the non-fugitive enclosure by placing a lightweight piece of paper near doorway openings to observe airflow direction. I observed the paper moving outward from the enclosure toward adjacent areas at multiple locations, which indicated positive pressure conditions. I repeated the observation several times and observed consistent results. ROP, FGFACILITY, SC IV.2 requires the non-fugitive enclosure to operate at a pressure lower than adjacent areas so that air flows into the enclosure through all NDOs. The observed outward airflow indicates that the enclosure was not operating under negative pressure as required.

ROP, FGFACILITY, SC V.4.a requires a RATA to be conducted at least once every eight calendar quarters. The previous RATA was conducted in July 2023; therefore, the next RATA was required no later than July 2025. The facility conducted the subsequent RATA on September 18, 2025, after the required deadline.

Next Steps:

A written response should be submitted through [MiEnviro Portal](#) by **July 21, 2026** and include all of the following:

- the dates the violations occurred;
- an explanation of the causes and duration of the violations;
- whether the violations are ongoing;
- a summary of the actions that have been taken and are proposed to be taken to correct the violations and
- the dates by which these actions will take place; and what steps are being taken to prevent a reoccurrence.

VIOLATION NOTICE

If the Company believes the above observations or statements are inaccurate or do not constitute violations of the applicable legal requirements cited, provide appropriate information to explain your position in your response to this letter.

Thank you for your attention to resolving the violations cited above and for the cooperation that was extended to me during my inspection. If you have any questions regarding the violations or the actions necessary to bring this facility into compliance, please contact me at the number listed below.

Sincerely,

A handwritten signature in purple ink, appearing to read 'Shamim', enclosed within a circular loop.
